

Sales Data Analysis Project Report

Author

Santhiya R

Project Overview

Interactive retail sales dashboard created in Microsoft Excel using Pivot Tables, Pivot Charts, KPI Cards and Slicers.

Objectives

Clean data, analyze sales, identify top category and best month, compare gender-wise sales, calculate average age, build an interactive dashboard.

Dataset

Columns: Date, Gender, Age, Product Category, Quantity, Price Per Unit, Total Amount, Month, Day and Year.

Data Cleaning

Checked blanks, removed duplicates, formatted dates and created Month, Day and Year columns.

Dashboard

KPIs: Total Sales, Top Category, Best Month, Average Age. Charts: Product Category Sales, Monthly Revenue, Gender Sales and Top Products by Revenue. Slicers: Product Category, Gender, Month and Age.

Business Insights

Electronics had the highest sales, May had the highest revenue, Female customers generated more sales, Average customer age: 41 years.

Skills

Excel, Data Cleaning, Pivot Tables, Pivot Charts, Slicers, KPI Design, Dashboard Design, Business Analysis.

Conclusion

This project demonstrates an end-to-end Excel data analysis workflow suitable for a beginner Data Analyst portfolio.
